

Parking Lot Safety

Why This Matters

Parking lots are shared spaces for vehicles and pedestrians, increasing the risk of collisions and injuries. Staying alert and following safe practices helps prevent accidents.

Common Causes

- Poor visibility and blind spots
- Speeding or distracted driving in parking areas
- Pedestrians not using designated walkways
- Poor lighting or unclear traffic markings

Practical Safety Actions

- Drive slowly and follow posted traffic signs
- Stay alert for pedestrians and moving vehicles
- Use designated walkways and crossings
- Park only in marked areas
- Ensure parking areas are well-lit and clearly marked

Staying alert in parking areas helps prevent injuries and property damage.
